## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 7-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 recites the limitation "the drive" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim 7 recites the limitation "the radial bearing and the axial bearing" in lines 2-3. There is insufficient antecedent basis for this limitation in the claim.

Claim 8 recites the limitation "the drive" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim 9 recites the limitation "the modules" in line 2. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3745

Claims 1-5, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Nagaoka et al. (5,501,583). Nagaoka et al. disclose a gas friction pump comprising: a stationary component 22B, a rotatable component 22A secured to a rotatable shaft 4, wherein the rotor shaft is supported with a magnetic bearing at the high vacuum end 9 and a bearing arrangement at the fore vacuum side end 10; and a sealing means 32 between the gas bearing and the low pressure side. The fore vacuum side bearing arrangement is characterized as comprising: a radial gas bearing and a magnetic axial bearing, a radial magnetic bearing and a axial gas bearing, a radial and axial gas bearing (Column 5, lines 10-30).

## CONCLUSION

### *Allowable Subject Matter*

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
